

The future of Solar Energy.

Solar PV system for electricity generation – from small town and production line to State GRID

Production of hydrogen for fuel requirements

Salt water or waste water distilling to fresh water

Solar energy to of contaminated water treatment and purification

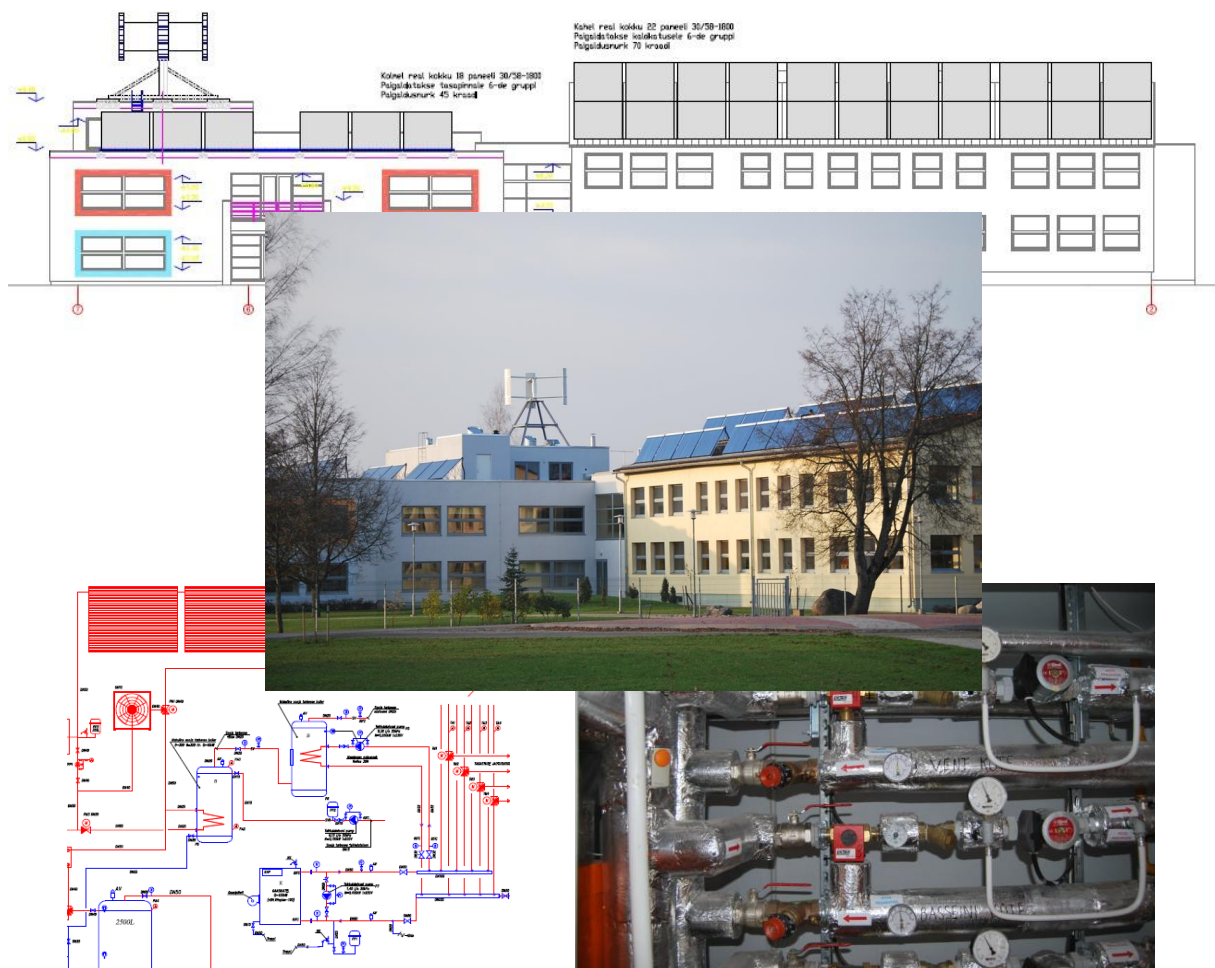

Solar charging stations for electric vehicles.

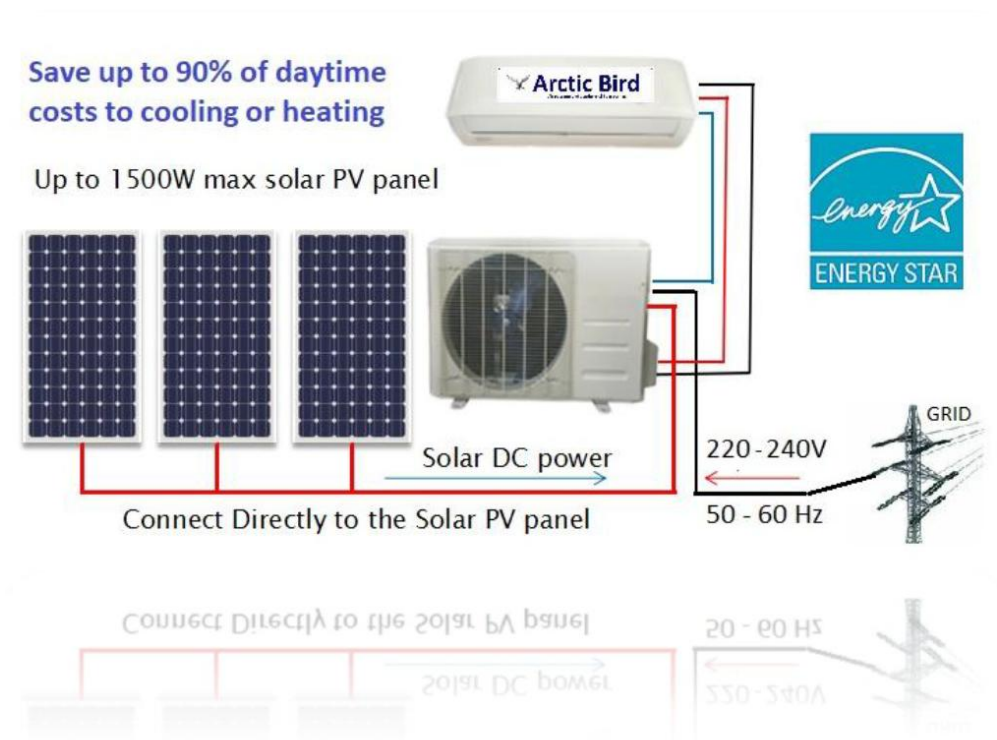

Solar electrical chillers and solar refrigeration

Solar DHW and heating / cooling systems.

Solar Hybride Air Conditioners and Heating Pumps

Agriculture watering system, small areas fresh water system.
